Subject: Assistance Requested: Delta Shipyard Pits

Greg:

John Gilbert told me to contact you as you were the expert on solidification/stabilization activities. I have some old barge cleaning pits in Houma, LA that we have assessed. We are looking to do an in place solidification/stabilization action. It appears that we are getting some anaerobic degradation that has taken place in the pits which has helped.

What suggestions do you have regarding solidification/stabilization of these types of pits or any other possible in-situ and cost effective remediation technologies that may be feasible

If you call me, call me on my cell if you need to talk with me.
